

Official Launch of the Combi-CB

- After 10 years of innovation, brand building and consolidating its position as the global leader in the long load handling sector, Combilift Ltd. is launching a revolutionary new Combilift product. The development of Combi-CB continues the company tradition of spotting a gap in the market and devising a niche solution for it.
- Versatility has always been a hallmark of Combilift products, and the Combi-CB is no exception. Martin McVicar explains: "The Combi-CB is more compact than a traditional forklift, has the added advantage of multi-directional operation, and is therefore ideal for any customer who handles mainly palletised goods with just a small percentage of long products."
- After two years of development and extensive trials, the Combi-CB is now in serial production. Combilift has expanded the premises by 20,000ft² to cope with the additional volume of output. This new model will increase Combilift's turnover by €10m during 2009, and create 20 additional jobs, on top of the 200 currently employed.
- The 2500Kg capacity Combi-CB is an excellent alternative to electric 4-way reach trucks. Its larger tyres, indoor/outdoor capabilities and multi-directional manoeuvrability offer customers more options. Martin foresees a wide variety of suitable applications for the truck, particularly in retail outlets where the use of all available shelf space is crucial. As there is no platform, goods can be stacked directly from the floor up, enabling 100% use of lower storage areas.

Combi-CB

Some Technical Info:

- 2.5Tonne/ 5000lb capacity
- Available in LP gas, diesel and electric
- Lift heights up to 7.5m
- IC units have hydrostatic drive on all 3 wheels
- Load sensing steering
- Side shift as standard
- 1.5m /5ft square in dimension (without forks)

Options:

- Fully enclosed cabin
- Fork positioner
