CONTACT NAME:	Sebastian Euchenhofer				
POSITION:	SALES MANAGER				

Since 1992 Copren has specialised in the automation of presses in sheet metal forming. We have focused in particular on the loading and unloading of mechanical and hydraulic presses by feeders and robots. Furthermore transfer systems for transfer presses and complete press lines belongs to our traditional expertise. Substantial experience from designing presses and related equipment, such as edge forming and trimming machines will be found in our company. All equipments are designed to meet individual requirements of our clientele. Copren robots, feeder and transfers are integrated with our clients' machinery in compliance with current safety legislation. Thus even older lines can be upgraded to meet latest industrial standards in safety and productivity. Our knowledge of presses, controls, automation and dies, makes us an ideal project partner for press users as well as press manufactures all over the world.

Move the future with our products:

- **TDCOP Electronic transfers** with double beams and two or three controlled axis, up to 14 servomotors
- **TDLCOP Electronic transfers** with linear motors (speed up to 120 pieces/minute)
- **TMCOP Walking beam transfers** with two or three controlled axis
- **TELECOP** Loading or unloading **electronic feeders** with two or three controlled axis
- **INTERCOP** Electronic **interpress feeder** between the presses with two or three controlled axis
- **DICOP Blank destacking units**
- **Lubricators units**
- **ROBOCOP Cylindrical robots** with two or three electronic axis
- **5 or 6 axes ROBOT integrator**
- **Complete automation** for production lines
